

The Fox Valley's premier refinishing company

Foxvalleybathtubrefinishing.com

847-650-6271

Thank you for your business and we know you'll love the new look of your freshly refinished fixture. Our product will provide you many years of continuous service but proper care should be taken. Just like any remodeling process, you need to take care of it in order for the condition to maintain. Proper cleaning of the bathtub/tile will ensure the finish stays looking great.

The refinishing products require mild, non-abrasive cleaners. **You cannot use any cleaning products containing ammonia or that are acid based.** These types of cleaners will remove the new finish. You must also use a soft, non-abrasive wash cloth or sponge. **We recommend a Blue Scotch-Brite (non-scratch) pad to clean.** The following list of products is safe to use with your new bathtub/tile. For refinished sinks we strongly suggest a use of a non-suction cup sink mat. Should you have any questions regarding cleaners please feel free to contact us.

Lysol Tub and Tile cleaner

409

Zep Tub and Tile Cleaner

Scrubbing Bubbles

DIY- Mixture of water and Vinegar

We recommend the use of a shower caddy or basket to eliminate shower items sitting on the bathtub ledges. Items sitting on the ledges can cause standing water which could possibly discolor the finish over time. Should you have any questions regarding cleaners please feel free to contact us.

Remember, bathmats and appliques **CANNOT** be used on the bathtub once it has been refinished.
